

RESUME

Vladimir Kalmykov

Senior+ Fullstack · TechLead

Moscow · remote

Telegram @xperier

SKILLS

FRONTEND

JavaScript · TypeScript · React · Next.js · CSS / PostCSS / Tailwind

ARCHITECTURE

Microfrontends · BFF · Design system · UI-kit · SSR / SSG

BACKEND

Node.js · Docker · CI/CD · PostgreSQL · MongoDB · Redis

AI

AI agents · Cursor · AI products · Chatbots

LANGUAGES

Russian	native
English	B2

EDUCATION

Environmental design

Moscow, 2007

ABOUT

Full-stack developer, architect and lead with 16+ years of commercial experience. Stack — JavaScript / TypeScript, React, Node.js. I work with backend, but lean frontend — and into design.

Dozens of projects behind me, from small sites to large b2b services. I have worked on teams as an engineer and as a team / tech lead, and as a solo developer and founder. I have taken on hard problems that decide a project's fate: architecture at the start, hiring and splitting ownership, internal and external product presentations, mentoring, and weekend fire drills (the "exhibition in Kazakhstan is Monday, we need a demo section by Sunday" kind).

Most interested in AI integrations, architecture, reusable tools and components, internal engineering standards, stack choices, and long-term technical planning.

Growing as a product engineer — working with the business directly and shipping my own SaaS (prettifai.ru).

Almost fully moved to working with AI. Strong experience both using AI for development and building AI-based tools: chatbots, editors, generation pipelines.

EXPERIENCE

Prettifai

Product Engineer

November 2025 — present
Moscow · 10 mo.

Frontend for an AI visual generation service — images and video that preserve the user's face. Built from scratch.

- Full cycle of a React + Next.js (App Router) app: architecture, UI/UX, state, performance.
- Admin and CMS: generations, templates, pipelines, analytics.
- Multiple AI providers in the UI: dynamic forms, previews, intermediate generations, fallbacks.
- Client-side billing, credits and checkout that keep the editor state.
- SSR/SSG, code-splitting, caching, focus on Core Web Vitals.
- Design system and components for complex generative-content flows.

Built with AI agents and full control over architecture and code quality.

YouGile

Senior Engineer

October 2024 — October 2025
Moscow · 1 yr 1 mo.

Modern frontend architecture, AI features, and bringing AI tools into the development process.

- Introduced React, TypeScript, UIKIT, API Toolkit and a build pipeline into the microfrontend extension system: extensions grew from 3 to 23 in a year.
- Built most of the hardest extensions — Workflow and Timetracker.
- Shipped an AI chatbot on Qwen on my own Tesla A100.
- Started the team's move to AI tools and laid the groundwork for an AI-first approach.

Left on good terms to go further into AI.

Kaspersky Lab

Senior Engineer

June 2023 — October 2024
Moscow · 1 yr 5 mo.

Frontend for a b2b product inside a large monolith with strict security requirements. Nested VPNs, stacked RDP sessions, debugging from bulky logs with no external tools.

- Ongoing debugging and optimization of Security Center in an enterprise environment.
- Focus on reliability, client-side security, and UI quality.

Left to work freely with modern AI tools — the company banned them entirely.

SmartPack

Head of UI Development

July 2020 — July 2022
Almaty · 2 yr 1 mo.

Built the frontend team from scratch.

- Shipped an MVP in a month that went straight into a pilot.
- Designed a scalable frontend architecture for a corporate service and two industrial apps.
- Hired and led a team of 6.
- The product became commercially successful: a billion marking codes in the first year.

Infotech Group

Core Team Lead

December 2016 — July 2020
Moscow · 3 yr 8 mo.

Led the core team: design system and UI-kit, engineering standards, and architecture guidelines.

- Over three years and eight months, built shared development standards and a design system used by several teams.

STACK

What I work with and have worked with.

CLIENT

React, Next.js (SSG/SSR/CSR), Vite, CRA, Webpack, Rollup, Zustand, Context + hooks, Redux Toolkit

SERVER

Node.js, Express, BFF, REST, GraphQL, WS, SSE, RabbitMQ, BullMQ, Redis, PostgreSQL + Prisma, MongoDB, SQLite

DELIVERY

Docker, Nginx, PM2, Ansible, Portainer, GitHub Actions, Jenkins, Prometheus, Loki

SECURITY AND QUALITY

OAuth2 / JWT / SSO, 2FA, CSP, CORS, XSS / CSRF, Jest, e2e, Puppeteer
