Profile

16 years in commercial software development. I build frontend architecture, design systems, and developer tools that help teams ship and evolve products. My work spans hands-on engineering, architecture, and leadership.

Selected results

YouGile extensions platform

Initiated the move to React, TypeScript, an SDK, and incremental builds. The modernization took about two weeks; the next extension took about one week.

SmartPack: platform and team from zero

Independently built the frontend architecture and first UI Kit, then hired six developers. The team shipped three web apps and an Android client; roughly a year later, one billion marking codes had been sold.

A shared system at Infotech

Built a design system, UI Kit, SDK and architecture standards used by three product teams.

Experience

Prettifai

Nov 2025 - present

Independent experimental product

I design a visual workflow editor and interfaces for complex AI processes. The code includes an execution graph, node caching, and selective reruns. Background jobs, provider integrations, and payment flows are also implemented.

YouGile

Oct 2024 - Oct 2025

Senior Software Engineer

Initiated modernization of the extensions platform with React, TypeScript, Rollup, an SDK, and incremental CI. Contributed to complex Workflow and Timetracker extensions. During my tenure the ecosystem grew from 3 to 23 extensions through the team's work.

Vladimir Kalmykov

Frontend Tech Lead / Software Architect

Kaspersky
Jun 2023 - Oct 2024

Senior Software Engineer

Developed and diagnosed Security Center frontend behavior in a large enterprise system with strict security and tooling constraints.

SmartPack
Jul 2020 - Jul 2022

Head of UI Development

Joined before a frontend platform existed; independently designed the architecture, UI Kit and standards. Personally hired six developers. The team shipped three web apps and an Android terminal app. Shared components, an SDK and documentation supported growth without substantial technical debt. Roughly a year later, the product had sold one billion marking codes.

Infotech
Dec 2016 - Jul 2020

Core Team Lead

Created a design system, UI kit, SDK, and architecture standards used as a shared foundation by three product teams.

Earlier work

Commercial software development since 2010, including end-to-end projects, direct client work, and unusual integrations. The detailed chronology begins in December 2016.

Technology and strengths

Frontend: TypeScript, JavaScript, React, Next.js, React Native, CSS, PostCSS.

Architecture: design systems, UI kits, SDKs, microfrontends, ESM, Rollup, CI/CD.

Leadership: team building, technical standards, documentation, cross-team collaboration.

Education and languages

Environmental Design, Institute of Modern Business Technologies and Management Systems, Moscow.
Russian - native; English - B2.
