Profile

16 years in commercial software development. I connect product UI, backend services, background work, and business logic. I test architecture decisions against the actual user journey and long-term maintainability.

Selected results

Prettifai: end-to-end product

Building a workflow editor, execution graph, background jobs, node caching, payment flows, and AI provider integrations for an experimental product.

Android terminal app

At SmartPack I built a React Native app in about three weeks, with a Java bridge for a specific device and Data Matrix scanning.

YouGile: extensible platform

Initiated a modern build pipeline and SDK for extensions, and contributed to complex Workflow and Timetracker features.

Experience

Prettifai

Nov 2025 - present

Independent experimental product

I design a visual workflow editor and interfaces for complex AI processes. The code includes an execution graph, node caching, and selective reruns. Background jobs, provider integrations, and payment flows are also implemented.

YouGile

Oct 2024 - Oct 2025

Senior Software Engineer

Initiated modernization of the extensions platform with React, TypeScript, Rollup, an SDK, and incremental CI. Contributed to complex Workflow and Timetracker extensions. During my tenure the ecosystem grew from 3 to 23 extensions through the team's work.

Vladimir Kalmykov

Senior Fullstack Developer / Product Engineer

Kaspersky
Jun 2023 - Oct 2024

Senior Software Engineer

Developed and diagnosed Security Center frontend behavior in a large enterprise system with strict security and tooling constraints.

SmartPack
Jul 2020 - Jul 2022

Head of UI Development

Built and led a six-person frontend team. Created a UI kit, a custom guide site with practical examples, SDK packages, and an internal release process. An AST tool helped localize three applications in about four days against an estimated month of manual work. Built a React Native terminal app with a native Java module.

Infotech
Dec 2016 - Jul 2020

Core Team Lead

Created a design system, UI kit, SDK, and architecture standards used as a shared foundation by three product teams.

Earlier work

Commercial software development since 2010, including end-to-end projects, direct client work, and unusual integrations. The detailed chronology begins in December 2016.

Technology and strengths

Product UI: TypeScript, React, Next.js, React Native, design systems.

Backend: Node.js, APIs, PostgreSQL, Redis, queues, background jobs, payments.

Delivery: Docker, CI/CD, provider integrations, diagnostics, architecture.

Education and languages

Environmental Design, Institute of Modern Business Technologies and Management Systems, Moscow. Russian - native; English - B2.
